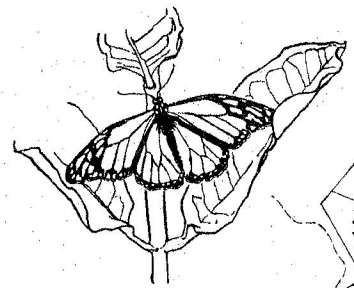
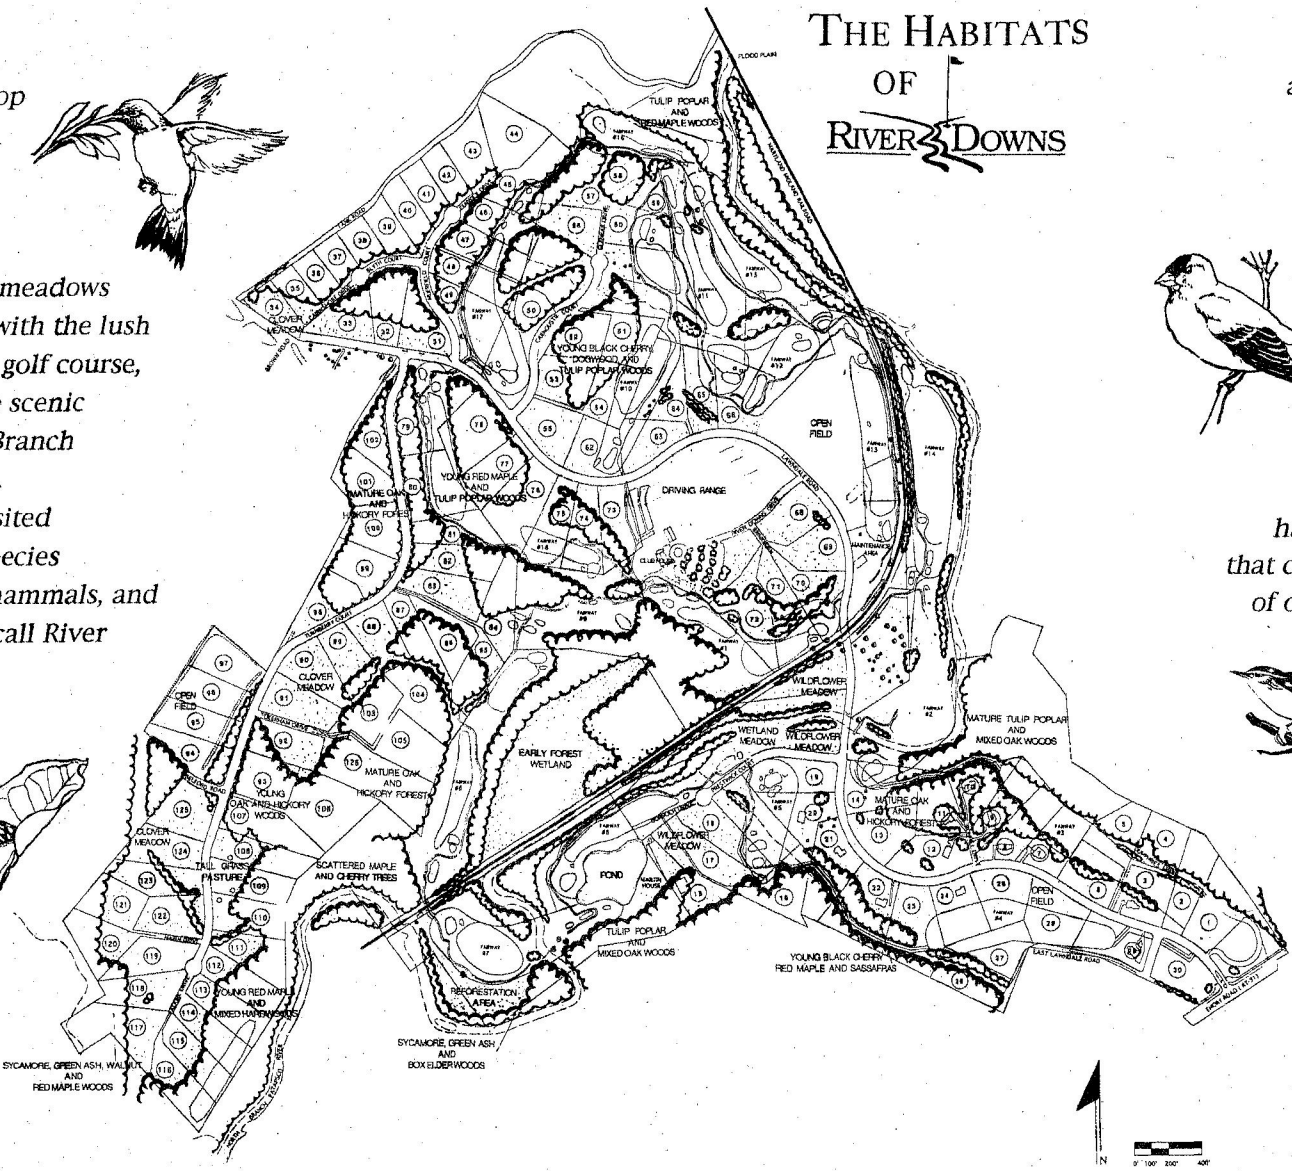
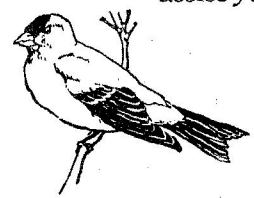
The Habitats of River Downs

River Downs is more than a housing develop -ment, it is a habitat for people, plants, and wildlife.

Ancient oak forests, wetlands, fields, and meadows share the landscape with the lush beauty of an 18-hole golf course, nature trails, and the scenic beauty of the North Branch of the Patapsco River. Residents also are visited daily by dozens of species of songbirds, small mammals, and butterflies who also call River Downs home.







As part of the site analysis and design for River Downs, our wildlife biologist has prepared dozens of helpful hints designed to assist you in building your new home with the least impact possible to the current "wild" residents of River Downs. Gaylord Brooks Realty Co. Inc., has done this because we feel that conservation and enjoyment of our natural resources means something more than setting aside vacant land for the occasional recreational outing - it means living everyday with the enjoyment and beauty of our own neighborhood landscapes.

Welcome to River Downs!
